Optical Interconnection Design Innovator

# GIGALIGHT 100G QSFP28 SR2 Optical Transceiver P/N: GQS-MPO101-SR2C

#### **Features**

- ✓ QSFP28 module form factor.
- ✓ Support QSFP28 SFF-8436/8636
- ✓ 2x53.125Gbps(26.5625GBd) PAM4 parallel optics architecture
- √ 4x25.78125Gbps NRZ retimed electrical I/O
- ✓ 2 channels 850nm VCSEL Array and PIN photo detector array
- ✓ Internal 4:2 Gearbox with KP4 FEC circuits on both receiver and transmitter channels
- ✓ Single MPO12/APC receptacle(Only use channel 1 and channel 2)
- ✓ Maximum link length of 100m OM4,70m OM3 (DSP KP4-FEC is ON)
- ✓ Built-in digital diagnostic functions
- ✓ Operating case temperature range: 0 to 70°C
- ✓ Single 3.3V power supply
- ✓ Low power consumption < 4W
  </p>
- ✓ RoHS compliant (lead free)

## **Applications**

- ✓ 100G SR2 (2x 50G PAM4) applications
- ✓ High-speed interconnects within and between switches, routers and transport equipment.
- ✓ Server-server clusters, super-computing interconnections
- ✓ Proprietary backplanes
- ✓ Interconnects rack-to-rack, shelf-to-shelf, board-to-board, board-to-optical backplane

#### **Description**

The Gigalight 100G SR2 QSFP28 optical transceiver is designed for using in 100-Gigabit Ethernet links up to 70m using OM3 and 100m using OM4. It is compliant with the QSFP28 MSA, IEEE 802.3cd and CAUI-4(no FEC)¹. Digital diagnostics functions are available via the I2C interface, as specified by the QSFP28 MSA. The module incorporates 2 channels 850nm VCSEL Array and PIN photo detector array. This results in an aggregate bandwidth of 100Gbps into a MPO cable. This module can convert 4 channels of 25Gbps (NRZ) electrical input data to 2 channels of 50Gbps (PAM4) optical signal, and also can convert 2 channels of 50Gbps

Optical Interconnection Design Innovator

(PAM4) optical signal to 4 channels of 25Gbps (NRZ) electrical output data. The electrical interface uses a 38-contact edge type connector. This transceiver is a high performance module for short-range duplex data communication and interconnects applications.

#### Note:

1. KR-FEC is optional, please contact us if necessary.

#### Note:

- 1. Module circuit ground is isolated from module chassis ground within the module.
- 2. Open collector should be pulled up with 4.7K to 10K ohms on host board to a voltage between 3.15V and 3.6V.

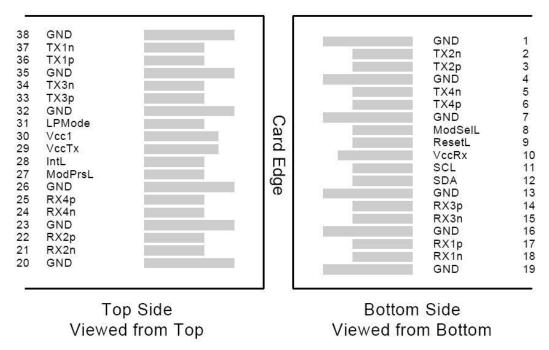

Figure 2. Electrical Pin-out Details

#### ModSelL Pin

The ModSelL is an input pin. When held low by the host, the module responds to 2-wire serial communication commands. The ModSelL allows the use of multiple QSFP modules on a single 2-wire interface bus. When the ModSelL is "High", the module will not respond to any 2-wire interface communication from the host. ModSelL has an internal pull-up in the module.

#### ResetL Pin

Reset. LPMode\_Reset has an internal pull-up in the module. A low level on the ResetL pin for longer than the minimum pulse length (t\_Reset\_init) initiates a complete module reset, returning all user module settings to their default state. Module Reset Assert Time (t\_init) starts on the rising edge after the low level on the ResetL pin is released. During the execution of a reset (t\_init) the host shall disregard all status bits until the module indicates a completion of the reset interrupt. The module indicates this by posting an IntL signal with the Data\_Not\_Ready bit negated. Note that on power up (including hot insertion) the module will post this completion of reset interrupt without requiring a reset.

#### LPMode Pin

Gigalight QSFP28 modules operate in the low power mode (less than 1.5 W power consumption). This pin active high will decrease power consumption to less than 1W.

#### ModPrsL Pin

ModPrsL is pulled up to Vcc on the host board and grounded in the module. The ModPrsL is asserted "Low" when the module is inserted and deasserted "High" when the module is physically absent from the host connector.

#### IntL Pin

IntL is an output pin. When "Low", it indicates a possible module operational fault or a status critical to the host system. The host identifies the source of the interrupt by using the 2-wire serial interface. The IntL pin is an open collector output and must be pulled up to Vcc on the host board.

## **Power Supply Filtering**

The host board should use the power supply filtering shown in Figure 3.

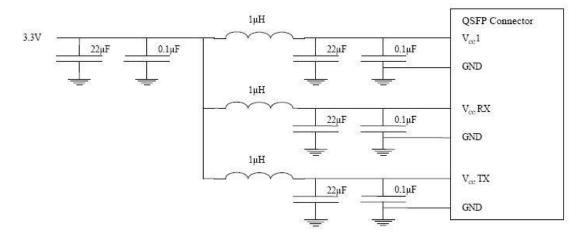

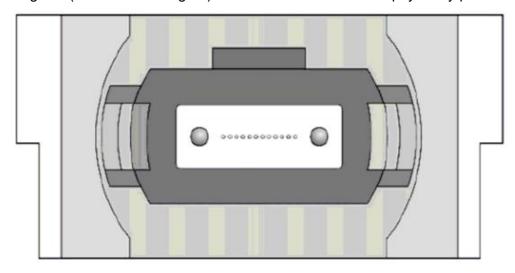

Figure 3. Host Board Power Supply Filtering

## **Optical Interface Lanes and Assignment**

The optical interface port is a male MPO connector. The four fiber positions on the left as shown in Figure 4, with

Optical Interconnection Design Innovator

the key up, are used for the optical transmit signals (Channel 1 through 2). The fiber positions on the right are used for the optical receive signals (Channel 2 through 1). The central four fibers are physically present.

Transmit Channels: 1 2

Unused positions: x x x x

Receive Channels: 2 1

# **DIAGNOSTIC MONITORING INTERFACE (OPTIONAL)**

The following digital diagnostic characteristics are defined over the normal operating conditions unless otherwise specified.

| Parameter                                   | Symbol       | Min  | Max | Units | Notes                            |
|---|--------------|------|-----|-------|----------------------------------|
| Temperature monitor absolute error          | DMI_Temp     | -3   | +3  | degC  | Over operating temperature range |
| Supply voltage<br>monitor absolute<br>error | DMI_VCC      | -0.1 | 0.1 | V     | Over full operating range        |
| Channel RX power monitor absolute error     | DMI_RX_Ch    | -2   | 2   | dB    | 1                                |
| Channel Bias current monitor                | DMI_Ibias_Ch | -10% | 10% | mA    |                                  |
| Channel TX power monitor absolute error     | DMI_TX_Ch    | -2   | 2   | dB    | 1                                |

Optical Interconnection Design Innovator

#### Notes:

Due to measurement accuracy of different single mode fibers, there could be an additional +/-1 dB fluctuation, or a +/- 3 dB total accuracy.

Digital diagnostics monitoring function is available on all Gigalight QSFP28 transceivers. A 2-wire serial interface provides user to contact with module.

The structure of the memory is shown in Figure 4. The memory space is arranged into a lower, single page, address space of 128 bytes and multiple upper address space pages. This structure permits timely access to addresses in the lower page, such as Interrupt Flags and Monitors. Less time critical time entries, such as serial ID information and threshold settings, are available with the Page Select function.

The interface address used is A0xh and is mainly used for time critical data like interrupt handling in order to enable a one-time-read for all data related to an interrupt situation. After an interrupt, IntL, has been asserted, the host can read out the flag field to determine the affected channel and type of flag.

| 128     | Identifier (1 Byte)                     | Identifier Type of serial transceiver  |
| 129     | Ext. Identifier (1 Byte)                | Extended identifier of serial transceiver  |
| 130     | Connector (1 Byte)                      | Code for connector type  |
| 131-138 | Transceiver (8 Bytes)                   | Code for electronic compatibility or optical compatibility   |
| 139     | Encoding (1 Byte)                       | Code for serial encoding algorithm   |
| 140     | BR, nominal (1 Byte)                    | Nominal bit rate, units of 100 Mbits/s   |
| 141     | Extended RateSelect Compliance (1 Byte) | Tags for Extended RateSelect compliance  |
| 142     | Length SMF (1 Byte)                     | Link length supported for SM fiber in km   |
| 143     | Length E-50 μm (1 Byte)                 | Link length supported for EBW 50/125 µm fiber, units of 2 m  |
| 144     | Length 50 μm (1 Byte)                   | Link length supported for 50/125 µm fiber, units of 1 m  |
| 145     | Length 62.5 µm (1 Byte)                 | Link length supported for 62.5/125µm fiber, units of 1 m   |
| 146     | Length copper (1 Byte)                  | Link length supported for copper, units of 1 m   |
| 147     | Device Tech (1 Byte)                    | Device technology  |
| 148-163 | Vendor name (16 Bytes)                  | QSFP vendor name (ASCII)   |
| 164     | Extended Transceiver (1 Byte)           | Extended Transceiver Codes for InfiniBand <sup>†</sup>   |
| 165-167 | Vendor OUI (3 Bytes)                    | QSFP vendor IEEE vendor company ID   |
| 168-183 | Vendor PN (16 Bytes)                    | Part number provided by QSFP vendor (ASCII)  |
| 184-185 | Vendor rev (2 Bytes)                    | Revision level for part number provided by vendor (ASCII)  |
| 186-187 | Wavelength (2 Bytes)                    | Nominal laser wavelength (Wavelength = value / 20 in nm)   |
| 188-189 | Wavelength Tolerance (2 Bytes)          | Guaranteed range of laser wavelength (+/- value) from Nominal wavelength (Wavelength Tol. = value / 200 in nm) |
| 190     | Max Case Temp (1 Byte)                  | Maximum Case Temperature in Degrees C  |
| 191     | CC_BASE (1 Byte)                        | Check code for Base ID fields (addresses 128-190)  |
| 192-195 | Options (4 Bytes)                       | Rate Select, TX Disable, TX Fault, LOS   |
| 196-211 | Vendor SN (16 Bytes)                    | Serial number provided by vendor (ASCII)   |
| 212-219 | Date code (8 Bytes)                     | Vendor's manufacturing date code   |
| 220     | Diagnostic Monitoring Type (1 Byte)     | Indicates which type of diagnostic monitoring is implemented   |
| 221     | Enhanced Options (1 Byte)               | Indicates which optional enhanced features are implemented   |
| 222     | Reserved (1 Byte)                       | Reserved   |
| 223     | CC_EXT                                  | Check code for the Extended ID Fields (addresses 192-222)  |
| 224-255 | Vendor Specific (32 Bytes)              | Vendor Specific EEPROM   |

Figure 8. Page 00 Memory Map

Page02 is User EEPROM and its format decided by user.

The detail description of low memory and Page 00. Page 03 upper memory please see SFF-8436 document.

## **Regulatory Compliance**

Gigalight GQS-MPO101-SR2 transceivers are Class 1 Laser Products. They meet the requirements of the following standards.

| Feature                  | Standard   |
|--------------------------|--|
| Laser Safety             | IEC 60825-1:2014 (3 <sup>rd</sup> Edition)<br>IEC 60825-2:2004/AMD2:2010<br>EN 60825-1-2014<br>EN 60825-2:2004+A1+A2 |
| Electrical Safety        | EN 62368-1: 2014<br>IEC 62368-1:2014<br>UL 62368-1:2014  |
| Environmental protection | Directive 2011/65/EU with amendment(EU)2015/863  |
| CE EMC                   | EN55032: 2015<br>EN55035: 2017<br>EN61000-3-2:2014<br>EN61000-3-3:2013   |
| FCC                      | FCC Part 15, Subpart B<br>ANSI C63.4-2014  |

## **Ordering Information**

| Part Number    | Product Description   |  |
|----------------|---|--|
| GQS-MPO101-SR2 | 100G QSFP28 SR2(2x50G PAM) 850nm, OM3 70m, OM4 100m, MMF, MPO12/APC |  |

Use of controls or adjustment or performance of procedures other than those specified herein may result in hazardous radiation exposure.

## **Important Notice**

Performance figures, data and any illustrative material provided in this data sheet are typical and must be specifically confirmed in writing by Gigalight before they become applicable to any particular order or contract. In accordance with the Gigalight policy of continuous improvement specifications may change without notice.

The publication of information in this data sheet does not imply freedom from patent or other protective rights of Gigalight or others. Further details are available from any Gigalight sales representative.
