## SFP28－DWDM 32G FC 10Km GSS－Dxx280－LRT

## Features

$\checkmark$ Hot－pluggable SFP28 form factor
$\checkmark$ Supports $24.33 \mathrm{~Gb} / \mathrm{s} \& 25.78 \mathrm{~Gb} / \mathrm{s}$ aggregate bit rate
$\checkmark$ Supports $28.05 \mathrm{~Gb} /$ s aggregate bit rate
$\checkmark$ Transmitter：cooled 25Gb／s DWDM EML TOSA
$\checkmark$ Compliant to ITU－T 694.1
$\checkmark$ Receiver：25Gb／s APD ROSA
$\checkmark \quad$ Internal CDR circuits on both receiver and transmitter channels
$\checkmark \quad 1.8 \mathrm{~W}$ maximum power dissipation
$\checkmark$ Maximum link length of 10 Km over SMF
$\checkmark \quad$ Duplex LC receptacle
$\checkmark$ Operating case temperature range：-40 to $85^{\circ} \mathrm{C}$
$\checkmark$ Single 3.3 V power supply
$\checkmark$ RoHS 2.0 compliant（2011／65／EU，lead free）

## Applications

$\checkmark \quad$ CPRI Option 10
$\checkmark \quad 25 \mathrm{G}$ Ethernet
$\checkmark \quad 32 \mathrm{GFC}$

## Description

This product is a 32G FC SFP28 transceiver designed for optical communication compliant with 25GE and 32G FC standard．Its high performance cooled DWDM EML transmitter and high sensitivity APD receiver provide superior performance for 25GE and 32G FC application up to 10km（with FEC）Links．

The product is designed with SFP28 form factor，which is the optical／electrical connection according to the SFP＋ Multi－Source Agreement（MSA）

Figure 1．Module Block Diagram
The SFP28 is an Enhanced Small Form Factor Pluggable SFP＋transceiver，and can be contacted through I2C system．

## Note：

1．Module ground pins GND are isolated from the module case．
2．Shall be pulled up with $4.7 \mathrm{~K}-10 \mathrm{Kohms}$ to a voltage between 3.15 V and 3.45 V on the host board．

Figure 2．Electrical Pin－out Details

## Tx＿Fault Pin

Tx＿Fault is a module output that when high，indicates that the module transmitter has detected a fault condition related to laser operation or safety．The Tx＿Fault output is an open drain／collector and shall be pulled up to the Vcc＿Host in the host with a resistor in the range $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$ ．

## Tx＿Disable Pin

When Tx＿Disable is asserted high or left open，the SFP＋module transmitter output shall be turned off unless the module is a passive cable assembly．This contact shall be pulled up to VccT with a $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$ resistor in modules and cable assemblies．Tx＿Disable is a module input contact．

## RS0／RS1 Pin

RS0 and RS1 are module inputs and are pulled low to VeeT with＞ $30 \mathrm{k} \Omega$ resistors in the module．RS0 optionally selects the optical receive signaling rate coverage．RS1 optionally selects the optical transmit signaling rate coverage．

## Mod＿ABS Pin

Mod＿ABS is connected to VeeT or VeeR in the SFP＋module．The host may pull this contact up to Vcc＿Host with a resistor in the range $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$ ．Mod＿ABS is asserted＂High＂when the SFP＋module is physically absent from a host slot．In the SFP MSA（INF－8074i）this contact has the same function but is called

MOD＿DEF0．

## Rx＿LOS Pin

Rx＿LOS when high indicates an optical signal level below that specified in the relevant standard．Rx＿LOS is an open drain／collector output，but may also be used as an input by supervisory circuitry in the module．For a nominally 3.3 V Vcc＿Host using a resistive pull up to Vcc＿Host the resistor value shall be in the range $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$ ．For a nominally 2.5 V Vcc＿Host using a resistive pull up to Vcc＿Host the resistor value shall be in the range $4.7 \mathrm{k} \Omega$ to $7.2 \mathrm{k} \Omega$ ．

## Memory Organization

The transceivers provide serial ID memory contents and diagnostic information about the present operating conditions by the 2－wire serial interface（SCL，SDA）．

The memory map specific data field defines as following．
